

H₂D reveals the secret to next-level home comfort

The app that shows how to optimize consumption, costs and comfort

Home life just got smarter

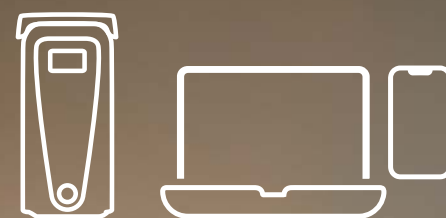

H₂D was created to finally make water and electricity use in home systems visible and transparent, and to reduce breakdowns to zero.

H₂D gives you effortless control over comfort, while allowing you to track usage and learn how to save.

Your plumber can monitor the system remotely, check that everything is working optimally and, where required, take action before issues arise.

DAB

With DAB pumps and H₂D, **water management is super simple**

Making your home comfortable is child's play

Power shower

To turn a regular shower into a "power shower", you need to boost water pressure to the max. H₂D lets you increase pressure parameters just for the time it takes to shower, while reducing usage for the rest of the day. Comfort guaranteed, every time.

Overview

On H₂D, you can get a real-time overview of your usage and the operating status of your system: if something's not right, contact customer support right away.

Good night

During the night, when even a slight buzz can sound noisy, you can turn on sleep mode, switching the already super quiet pump to whisper-quiet operation.

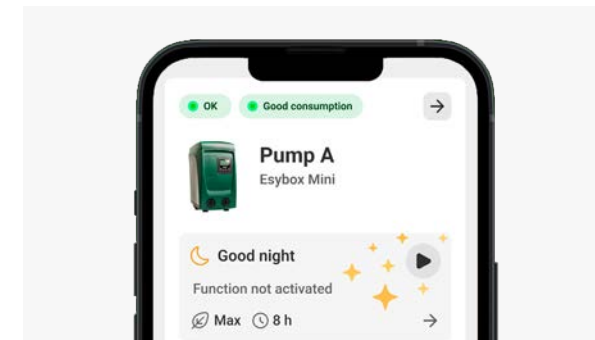

Smart Home

If you prefer, you can control comfort modes simply by talking to Alexa and Google Home voice assistants. Even while you're in the shower!

Say goodbye to **water woes!**

When systems are monitored, they're also less prone to failure. H₂D offers your plumber or maintenance person remote control functions that allow them to monitor the system and edit its parameters accordingly **to prevent the risk of trouble**. Moreover, if there is a fault, the technician gets an immediate notification, allowing them to take action in record time!

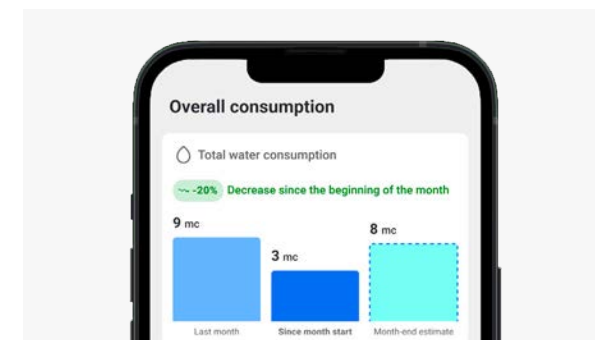

See for yourself!

With H₂D, you can always view the status of the system. If something's not quite right, the app can even send a notification to your technician.

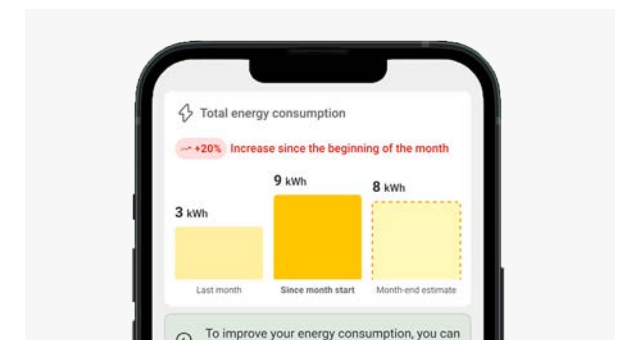

Take the worry out of going away

When you're away from home, you can minimize usage or even turn the system off altogether. If your garage has a drainage system, you can keep an eye on levels and, by connecting it to a technician, you can rest assured you won't be coming home to any nasty surprises.

Keep an eye on water wastage

Checking water consumption is simple and immediate. If there's a leak, H₂D will tell you straight away so you can get it fixed.

Save money and resources

With H₂D, you can check consumption and optimize the system's parameters to achieve significant energy savings, which are also reflected in reduced power bills.

H₂D is ideal for...

Gardens and irrigation systems; hydroponic systems; rainwater or wastewater reuse systems; water pressure boosting.

H₂D subscriptions: basic and premium plans

The Basic profile gives you everything you need: real-time monitoring, comfort management and tracking of usage. Upgrading to Premium gives you access to additional features: annual data log, customized alarms and the option of controlling all pump parameters remotely.

	Basic	Premium
Compare current / previous month consumption	✓	✓
Annual consumption history (day, week, month)		✓
Comfort functions: Power shower, Good night mode	✓	✓
Home assistants (Alexa, Google home)	✓	✓
Alarm Display	Last alarm only	Complete alarm log
In-app push notifications	✓	✓
Remote monitoring - basic parameters	✓	✓
Control basic parameters		✓

How to get started and subscribe to the premium plan

Easy: if you already have a DAB device, simply visit **h2d.com** or go to the app store or play store and download the app. Follow the instructions to pair your pump.
If you don't have a DAB product yet, ask your plumber and get ready to take your everyday life to a whole new level of comfort.

A new generation of **smart pumps**

H₂D comes as standard on all new DAB models: just choose the best fit for your needs.
For example, if you live in a **detached house** and want to keep your home consumption under control, the best solution for you is **EsyBox Mini**.
Whereas if you live in a small **apartment building**, the ideal option for you is **EsyBox**.

Our focus: sustainability!

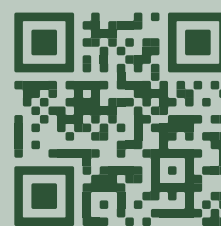

DAB technologies are designed to save vital resources like water and energy.

- H₂D detects water leaks and provides tips on optimizing energy usage.
- The app advises you how to improve your environmental footprint.
- The systems monitored are less prone to faults: this means less replacements, greatly reducing the quantity of raw materials used.

With H₂D, water
is under control.
